

SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY
BSc Special (Hons) in Information Technology – Software Engineering
Unit: Human Computer Interaction (HCI)
Practical 1

Homework 0: Pick a Device (Software)

All of the assignments in this course will be pair-work. Most of them will involve creating a simulated user interface for a complex software systems. Each student will pick a different software. However, for a multi-function, multiple groups cannot pick the same topic. You will use the software you select, for the entire course, so choose wisely. You will need to pick a device with some complexity; that is, with some tasks that are difficult to do.

Everyone should come up with two choices, and the make sure that the people above you didn't pick what you selected. We will try to give everyone their choices, but everyone must have unique software.

Below are some examples that might be selected, but feel free to make up your own, with permission of the instructor.

Note that if you want to use an application, a software system or website of your company, that is fine, but it has to be public (that is, not secret), so that others can see the current design, and your prototype for a redesign.

Note: for Homework 1, you will have to test a user on a real version of the software, so you should select something you own or have access to.

- Use Published list of software categories to select a topic.

Activity:

Study approved project topic and fill the following details relevant to selected software.

SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY

BSc Special (Hons) in Information Technology – Software Engineering

Unit: Human Computer Interaction (HCI)

Practical 1

Paired Project: Human Computer Interaction

Deliverable: One (Topic Selection)

Submission Date:

<Refer the semester practical Schedule published on Course web>

Due Date:

<Refer the semester practical Schedule published on Course web>

Group Details

Group ID : <will be assign in first practical session>	Name	SLIIT ID	Phone	email
